

Yerik Kassym

Senior Business Analyst | Multi-System Integrations, APIs & Digital Platforms

Almaty, Kazakhstan · yerik.kassym@gmail.com · linkedin.com/in/kassymyerik · Remote · Part-time / contract

SUMMARY

Senior Business Analyst with 4+ years delivering requirements across a broad digital landscape—not a single platform. Own BRD → technical requirements → API documentation → pre-business testing for many connected systems: Amadeus, loyalty/FFP (Grafty), messaging providers, CX/helpdesk channels, and a CDP customer-data layer (previously Emarsys). Hands-on with REST/SOAP, Postman, schemas, and end-to-end data/process flows. Partner with business and engineering on in-house builds and vendor platforms from discovery through go-live.

CORE SKILLS

Business analysis: BRD review & completion · Technical & functional requirements · Process / data-flow maps · Schemas · Acceptance criteria · Pre-business / UAT testing

Integrations & APIs: REST · SOAP · API documentation · Postman · Multi-system integration requirements · Source-to-target data flows

Systems landscape: Amadeus · FFP / Grafty · CDP (incl. Emarsys → consolidated customer-data layer) · Infobip · SendGrid · 15 Below · Zendesk → Q19

Channels: Help center · Telephony · WhatsApp · Chatbot · Email & notifications · Lifecycle messaging

EXPERIENCE

Air Astana — Almaty, Kazakhstan

Senior Business Analyst (Apr 2024 – Present) · **Senior Analyst, Digital Business** (Jun 2025 – Present) · **Business Application Analyst** (Oct 2021 – Present)

Multi-system platforms & integrations

- Own technical requirements and analysis across a multi-system landscape: Amadeus integrations, FFP/Grafty platform work, messaging/notification providers, CX channels, and CDP as one customer-data layer among many connected systems.
- Map end-to-end workflows and data flows between operational, loyalty, CRM/CX, and marketing systems; produce schemas, diagrams, and integration requirements so each system handoff is clear.
- Messaging & notifications via 15 Below, Infobip, and SendGrid (email, WhatsApp, and related channels); previously Emarsys; currently include CDP feeds as part of the wider integration picture—not as a standalone focus.
- Lead Zendesk → Q19 channel migration (help center, telephony, WhatsApp, chatbot)—current-state maps, requirements, and pre-business validation before go-live.

Requirements, APIs & delivery

- Review and complete BRDs with business stakeholders; translate initiatives into technical requirements, acceptance criteria, and implementation-ready documentation for in-house and vendor work.
- Author REST/SOAP API documentation and integration specs; maintain Postman collections for endpoint validation and analysis across systems.
- Run pre-business tests before handoff to business sign-off; identify gaps, data-quality risks, and cross-system constraints early.
- Partner with engineering, vendors, and business teams from discovery through go-live on platforms and channel implementations.

Solution Engineer — Adikteev, Paris, France

2020 – Jul 2023

- Bridged commercial and engineering stakeholders to scope solutions, clarify requirements, and align technical delivery with customer outcomes in a product/platform environment.
- Translated business goals into actionable functional/technical next steps—foundation for BA work on integrations and APIs.

Technical Lead Engineer — Nommi, Almaty, Kazakhstan

Aug 2018 – Aug 2019

- Led technical delivery collaboration; coordinated priorities and communicated feasibility trade-offs to stakeholders.

Project Engineer — Huawei Kazakhstan, Almaty

Apr 2017 – Nov 2017

- Supported project execution and technical coordination under timeline and quality constraints.

EDUCATION

M.S., Computer Science (Communication Networks) — Université Paris-Saclay · 2019 – 2020

M.S., Information Systems — Kazakh-British Technical University · 2018 – 2019

B.S., Information Systems — Suleyman Demirel University · 2013 – 2017
